

## NETMOTION WIRELESS AND 2FA VALIDATE COMPATIBILITY: PRODUCTS COMBINE SECURE MOBILE VPN AND ADVANCED AUTHENTICATION FOR CJIS COMPLIANCE

AUSTIN, TX – May 15, 2012 - 2FA and NetMotion Wireless announced today that they have tested and validated compatibility of their products. 2FA's innovative Advanced Authentication product, 2FA ONE, and the NetMotion Wireless market-leading Mobility XE mobile VPN are certified to work seamlessly to provide customers with a solution that complies with critical sections of the CJIS Security Mandate, including Advanced Authentication and Wireless Access Restrictions.

For industries with large mobile workforces, such as law enforcement, public works, emergency medical services, fire departments, and telecommunications, implementation of strong authentication practices is necessary for government mandates. NetMotion Wireless relies on partners such as 2FA, Inc., to fulfill the Advanced Authentication requirements. 2FA's convenient and cost-effective advanced authentication product features integrated single sign-on for streamlined secure access to applications.

*"There's a misconception we're finding in the marketplace that secure connectivity alone is enough to satisfy the CJIS mandate as it pertains to Advanced Authentication. However, Advanced Authentication is a key requirement in addition to secure connectivity, so ensuring compatibility between our two products is vital to mobile workers."* says Greg Salyards, CEO of 2FA.

With the combined use of these technologies, mobile workers need only tap a badge once to logon to Windows with Advanced Authentication, thereby establishing their NetMotion mobile VPN session and performing Advanced Authentication to a myriad of data provided by Criminal Justice Information Systems. The result is a faster, safer, more convenient, and more secure access to the desktop and critical applications.

Salyards commented on the resulting effect: *"Users in the field now don't need to worry about typing in passwords while driving. Now they can simply tap their card and be authenticated to not only the desktop, but their applications as well. They'll remain continuously connected with market-leading security provided by NetMotion and will have a hassle-free network experience, while complying with government mandates and best security practices."*

According to Andy Willett, Senior Vice President of Sales and Marketing for NetMotion Wireless, "The 2FA and NetMotion Wireless product offerings complement one another well, especially in mission-critical deployments. It's critical for NetMotion to help our customers meet the Advanced Authentication requirements for CJIS compliance as easily and cost effectively as possible, and validating our compatibility with products like 2FA's is an important way to do just that."
